SPECIALTY:
PHARMACOPŒIA AND SURGICAL PLASTERS,
IN
INDIA RUBBER COMBINATION,
POROUS AND SPREAD.

SEABURY & JOHNSON,

Manufacturers of

INDIA RUBBER MEDICINAL, ADHESIVE, BUNION,
CORN, COURT, KID, LEATHER, MUSTARD,
SPREAD, PHARMACEUTICAL AND
SURGICAL

PLASTERS,

Of every description in the most approved form.

Also,

Absorbent and Borated Cotton, Antiseptic Gauze,
Bandages, Cotton Wool, Cutta Percha Tissue, Lint,
Oil Silk and Muslin, and Surgical Dressings.

Office and Salesroom, 21 PLATT STREET,
NEW YORK.

MEDICAL JURORS' CRITICISM

Of Our Manufactures.

"The labors and inventions of this firm entitle them to the highest and only award, over all English, French, and American competitors, for originality and improvements in their branch of Pharmaceutical Chemistry. An improvement over the unstable and unsatisfactory articles made by other methods was imperative. After continuous experimentation and careful study, they successfully utilized **India Rubber**, as a base for all medicinal and mechanical plasters. The advantages of Rubber Plasters are :

Perfect Pliability in any temperature.

Adhesion without Heat or Moisture.

India Rubber Preserves the incorporated Extract or Drug.

Perfect cleanliness and Reasonable Price.

Being Porous they do not slide or move, thereby ensuring increased local action.

They remain serviceable longer than other plasters.

"Purified Rubber is a neutral element, specially valuable as a vehicle for plasters, on account of its great elasticity and flexibility.

"Its well-known resistance to moisture and atmospheric influences, undoubtedly preserves the incorporated medication from evaporation or decomposition ; scientifically combined with adhesive agents, they can be applied without heat or moisture. Porousing medicinal Plasters gives increased local action.

"Seabury & Johnson's Officinal Plasters have been critically examined and found to be honestly prepared from reliable materials, and fully entitled to the voluntary professional endorsements with which their goods are favored. They manufacture in the most approved and practical form the most extensive line of plasters ever produced. The members of this firm are practical pharmacists and chemists, fully comprehending professional necessities, and have through their creative talent, produced many appliances for which every practitioner throughout the civilized world should be truly grateful."

TERMS:**CASH THIRTY DAYS.**

ONE PER CENT. FOR CASH

Will be allowed, provided bills are remitted for
within TEN DAYS from date of shipment,
not otherwise.

DISCOUNT FROM LIST PRICES:

10 per cent will be allowed on all orders
amounting to \$25.00 net.

Long prices will be charged for lesser amounts.

Orders amounting to \$100 net
will be delivered boxing and cartage free.

Five Days after receipt of goods.

EVERY ARTICLE WARRANTED.

HIGHEST AWARDS OVER ALL COMPETITORS
at two World's Exhibitions.

PARIS,
1878.
PHILADELPHIA,
1876.

MEDICAL JURORS' AWARD.

"ORIGINALITY. The successful application of rubber as a base for all medicinal and mechanical plasters.

"RELIABILITY and general excellence of manufactures."

The Committees of Examination were composed of medical experts from Austria, France, Germany, Great Britain, Italy, Russia, Spain, and America; their reports and awards were based upon a careful inspection of the manufactures and claims of the various exhibitors. At both exhibitions it was our good fortune to receive the highest and only awards over all European and American competitors for improved and superior Pharmacopœia and Surgical Plasters. These awards are the highest professional testimonials obtainable. The judgment of the World's Jurors is universally confirmed by eminent Physicians and Surgeons, as well as by influential Medical and Pharmaceutical Journals.

As the application of India Rubber as a base for all plasters originated with us, we may be pardoned for mentioning the following indisputable fact, that within the past five years we have given to Physicians, Surgeons, and Pharmacists, more labor-saving and practical improvements in our special branch of Pharmaceutical Chemistry than all other European and American manufacturers combined.

While we have invented necessary and convenient appliances, we have also supplied them at exceedingly low rates, unequalled in quality and purity of materials, medication, fabric, elegance, or neatness. The high standard we have made it our especial pleasure to maintain will be adhered to with unswerving fidelity.

The preference, confidence, and voluntary recommendations, with which Practitioners and Pharmacists continually favor us, are indeed gratifying and fully appreciated; in return, we can assure them that our best efforts and energies will be vigilantly directed towards sustaining the reputation of our specialties, and remain,

Yours very truly,

SEABURY & JOHNSON.

October 1, 1879.

PHARMACOPŒIA AND MEDICINAL INDIA RUBBER POROUS PLASTERS.

Pharmacists and druggists will have the kindness to bear in mind, that we manufacture but

ONE QUALITY

of Medicinal and Surgical Plasters. When a physician prescribes an officinal preparation, he invariably expects such article to be of pharmacopœia strength. To depart from established formula, or to cheapen medicinal preparations by the introduction of inferior drugs or extracts, is simply reprehensible. Such preparations not only baffle the acknowledged skill of practitioners, but it also reflects disadvantageously, the judgment and intelligence of the dispensing pharmacist or druggist. It has never been our aim and never will be to calculate how cheap we can produce a suspicious class of medicinal articles.

The extensive demand united with our unequalled facilities for the economical production of our specialties, enables us to offer the best quality of *elegant and unimpeachable goods at exceptionally low prices*. They are skillfully made of purified india rubber, selected drugs, and incorporated with an unquestionable quality of alcoholic medicinal extracts. Every pharmacopœia article is warranted to be of proper strength and guaranteed to give *perfect satisfaction* in every respect.

INDIA RUBBER POROUS STRENGTHENING PLASTERS.

While we offer these at exceeding low rates, we can assure the trade that they are of first quality in every particular.

BENSON'S CAPCINE POROUS PLASTER.

The superiority of this truly good remedy over all other porous plasters, is now universally conceded. They are a great improvement over the Porous Strengthening Plaster on account of their remarkably active and powerful medicinal properties. They will cure in a few hours many localized ailments that the Porous Strengthening Plaster will not even relieve in days and weeks of continuous wear.

OVER 5,000

PHYSICIANS, PHARMACISTS AND DRUGGISTS

of excellent reputation, voluntarily endorse and recommend them as being the best Porous Plaster ever invented.

CAUTION.

The symbol word "**Capcine**" has been patented and registered according to law. An Act passed August 13th, 1876, makes the buying and selling of a direct or colorable imitation of the word "**Capcine**" punishable. We trust the trade will aid us in protecting the excellent reputation of this article. All infringements will be promptly prosecuted.

SPECIAL FORMULA MADE TO ORDER.

Plain Spread and Porous at same rates.

All Yard Roll Plasters are enclosed in Decorated Tin Cases.

BELLADONNA PLASTER.

Our article is incorporated with the Alcoholic Extract of Belladonna ; it is freed from all irritating and stimulating properties, thus promoting to its fullest extent the uninfluenced action of this valuable sedative. Until recently many practitioners have been induced to give preference to Inspissated or Aqueous English Extracts, based on the supposition that a better effect could be obtained by their use. Analytical comparisons between the relative merits of both preparations, conducted by ourselves and substantiated by competent chemists, conclusively prove that the Pharmacopœia Alcoholic Extract contains fully twice the amount of Atropine. This statement is corroborated by the following,

Analysis of Belladonna Plasters,

BY

Prof. R. OGDEN DOREMUS.

MESSRS. SEABURY & JOHNSON:

{ BELLEVUE HOSPITAL MEDICAL COLLEGE,
NEW YORK, Sept. 7, 1878.

"Gentlemen—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell's Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and my analysis demonstrated that Seabury & Johnson's contains the greatest proportion of the active principle of Belladonna, and is the most reliable Plaster.

PROF. R. OGDEN DOREMUS, M.D., L.L.D."

Also see Dr. Battershall's Analysis of Belladonna Plaster on page 24.

CANTHARIDAL OR BLISTER PLASTER.

Camphorated or Plain.

When used according to our directions, it never fails to vesicate quicker than the cerate. Its cleanliness in use is one of its best qualities for preference and recommendation. Carefully selected flies are very skillfully manipulated at a low temperature. It will remain perfectly reliable in any climate. By the incorporation of Camphor, strangury is prevented. It can be ordered with or without Camphor.

THAPSIA PLASTER.

In Rubber Combination.

This Plaster is highly esteemed in France ; its reputation is due to its powerful action as a *local irritant*, and *revulsive*. Our article will be found a great improvement on best French makes. We incorporate the Resin of Thapsia. The formula employed by us is precisely the same as used in France.

(FORM PATENTED.)

BREAST PLASTERS
of
BELLADONNA AND LEAD.

Every practitioner will appreciate the form of our article ; it conforms perfectly to the Mamma ; the uncomfortable stimulating effects of Ointments, Salves, and all external applications that impede the free action of the skin, is almost entirely reduced by the plaster being made porous. In addition to these beneficial qualities, its cleanliness in use must not be underestimated.

MEAD'S ADHESIVE PLASTER.

Pliable and Antiseptic.

14 Inches Wide. Per Yard, - - - - 25 cents.

This article is entirely new, and possesses the following qualities :

It is Pliable, Antiseptic, Waterproof, Non-Irritating and Strong.

The warmth of the body makes it adhere firmly.

Cheap Adhesive Plaster is liable to become unserviceable after a short time, even when prepared with the utmost care and skill ; at best, it is unwieldly and moderately adhesive. On the other hand, Mead's Adhesive Plaster overcomes every objection, and is sold at a very reasonable price ; every ingredient is rendered chemically pure, and spread on strong cotton cloth. The cloth can be torn without danger of removing the plaster mass.

EMINENT EUROPEAN AND AMERICAN SURGEONS

have recognized with gratification and pleasure, the many practical time and labor-saving Surgical Plasters we have invented and introduced for their special convenience. For Surgeon's Antiseptic Isinglass Plasters on Silk and other fabrics, adaptable to every form of operation, see pages, 11, 17 and 19.

REPORT FROM NEW YORK "BELLEVUE," The Largest American Hospital.

Messrs. SEABURY & JOHNSON :

Gentlemen :—The Rubber Adhesive Plaster furnished to this Hospital by your house, has proven superior in every respect to any plaster we have seen, for all surgical purposes.

ALEX. B. MOTT, M. D., Professor of Surgery.

BELLEVUE HOSPITAL, May 10, 1879.

From C. FAYETTE TAYLOR, Eminent Surgeon.

"I find that the Surgeon's Salicylated Rubber Adhesive Plaster, prepared by Seabury & Johnson, is the best I ever employed."

SEABURY & JOHNSON'S SALICYLATED INDIA RUBBER ADHESIVE PLASTER, IN FRACTURES.

By E. YOUNKIN, M.D., Professor of Surgery.

"I have used adhesive plasters for many years for the purposes of *extension, counter extension, holding splints* in their proper places, and for the dressing of wounds and surgical operations; but, *the method of manufacturing adhesive plaster as now employed by Seabury & Johnson, has given greater perfection to these kinds of dressings, and consequently their employment now, co-tributes better results and greater satisfaction.*

The antiseptic properties are a great desideratum, as they can be kept on without corroding, or in any way inducing septic conditions.

The Rubber Adhesive Plaster has great adhesive properties. Where strength and durability is required, this is the plaster. It adheres by the warmth of the body, and sticks as long as required. In my new method of treating a broken clavicle there is nothing equal to it."

POROUS OR PLAIN SPREAD.

For Orthopædic practice, extension, counter-extension, the setting of fractures or holding of splints, this plaster remains unequalled.

* Twilled Linen is very strong and free from elasticity; it is fully equal to Moleskin for similar uses.

KID PLASTERS.**LEATHER PLASTERS.**

These are spread on soft, specially prepared sheep skins, and are not surpassed either in quality or finish.

OBSERVATION.**Why India Rubber Porous should be preferred
to Leather Plasters.**

Our porous or spread Plasters 5x7½ inches, in India Rubber combination, complete a sortment of which will be found on page 5, are in every way preferable to Leather Plasters. The latter, made in the very best manner are in no sense comparable with the former, they (Kid Plasters,) are stiff, uncomfortable to wear, and slide from the part on which they have been applied. India Rubber Porous Plasters are perfectly flexible, remain firmly affixed to the attached part, are comfortable to wear, and

From a Sanitary Point of View

are immeasurably superior; not the least consideration is, notwithstanding all their superior qualities, that we offer them

Much below the Price of Kid or Leather Plasters.

Our experience has demonstrated the well established fact, that India Rubber porous and spread Plasters have within the past five years almost entirely superceded Leather Plasters.

FISH ISINGLASS,
and

SURGEONS' ANTISEPTIC ISINGLASS PLASTERS.

For surgical purposes when absolutely pure, Fish Isinglass is undoubtedly the best and most innocent of vehicles that can be employed to create firm adhesion. Heretofore its high cost has prevented its use. *A process recently invented by us*, for the production of chemically pure Gelatine, from the fresh fish-sounds, during the operation of which all fatty, fibrous, sanguineous, and oily matter is wholly removed, has encouraged us to give this class of goods our special attention.

The mechanical vehicle being absolutely pure, and charged with Salicylic Acid to prevent septic conditions, besides being in combination with India Rubber on strong, pure fabrics, we at once combine every practical quality.

Physicians and Pharmacists often complain that Isinglass Plasters (many of which are everything else than the name on label implies) irritate and inflame the parts upon which they are applied. *These effects are due wholly to the use of impure materials, or improperly treated Isinglass*, or substitutes calculated to cheapen its cost ; Isinglass when held in solution quickly decomposes ; *by our method putrefaction becomes impossible.*

Through our perfect treatment, the adhesiveness of all our Isinglass Plasters is greatly increased and quickly susceptible to moisture. They will give excellent satisfaction and be found a decided improvement.

All Isinglass Plasters in Yard Rolls are enclosed in Decorated Tin Boxes.

APPLIED BY WETTING.

SURGEON'S

SALICYLATED ISINGLASS PLASTER.

On Fine Pure Silk.

“Flesh, White or Black.”

7 inches wide, 1 yard long, per dozen, - - - \$5.50

ISINGLASS PLASTER, on Canton Flannel.

Salicylated.

Yard Rolls, 7 inches wide, per dozen, - - - 7.00

SPREAD SPECIALLY FOR WARM CLIMATES.

**SURGEON'S
SALICYLATED ISINGLASS PLASTER.
APPLIED BY WETTING.**

Spread on Strong Waterproofed Cotton Cloth.

COMBINED QUALITIES.

Strength of Material ; It is Antiseptic, Non-irritating, Very susceptible to the slightest Wetting, Very Adhesive, Quickly Applied, Waterproof, Does not Spoil, Warranted to keep Good in any Climate any Length of Time, and sold at a very Moderate Price.

SPECIAL ADVANTAGES.

For the varied operations of the surgeon in private or hospital practice, this plaster deserves special recognition. It can be applied almost instantly without heat. The application of moisture conveyed in any form (*the most convenient medium being that of a wetted sponge*) causes it to adhere quickly.

IF YOU CAREFULLY WET THE SURFACE OF THE PLASTER OR DRAW IT THROUGH WARM OR COLD WATER IT WILL ADHERE VERY FIRMLY AND CLOSELY. Being waterproof, wounds can be cleansed without re-dressing, whilst the mild antiseptic action of the incorporated salicylic acid entirely prevents putrefaction.

It remains serviceable in any climate for years.

It Cannot Spoil.

(For styles and prices see page 17.)

**SURGEONS'
TRANSPARENT DRESSING PLASTER.**

Antiseptic.

Surgeons will find this article very advantageous in the treatment of small cuts or wounds ; by its use they will be enabled to note the process of healing, without risking the dangers attending redressing.

(See Page 17 for price.)

WITCH HAZEL ISINGLASS PLASTER.

Antiseptic.

The introduction of Hamamelis in an Antiseptic Isinglass Plaster, on silk, will be looked upon by many practitioners as a very desirable improvement ; its acknowledged therapeutic value in the treatment of open wounds is one of its strongest recommendations.

(See Page 19 for price.)

TESTIMONIALS FROM THE BRITISH MEDICAL PRESS.

THE "LONDON LANCET."

"Messrs. SEABURY & JOHNSON have produced a list of Plasters, all made with India Rubber as a basis, which are elegant, stick well, are flexible, easily adapting themselves to the folds of the skin, occasion no inconvenience to the patient, and have the appearance of being made with faithfulness to the British Pharmacopœia. One Plaster worthy of especial praise is the Salicylated Isinglass, it is flexible, and on being slightly wetted makes a good adhesive plaster for surgical purposes."

THE "LONDON MEDICAL PRESS AND CIRCULAR."

"Among more recent and valuable Pharmaceutical improvements we would draw the attention of the reader to an elegant and convenient lot of Plasters prepared by SEABURY & JOHNSON. We have recently tried some of them, and find them to be, severally, very neat, clean, and efficacious preparations. India Rubber has been used as a base in the preparation of the Plasters, by which means the medicinal substances used are protected. With regard to their therapeutical efficacy, and the style in which they are got up, we can speak from experience. Among the other Plasters which have given us great satisfaction, we may mention those in which *Belladonna* and the *Spanish Fly* are, respectively, the chief ingredients."

THE "LONDON MEDICAL RECORD."

"Messrs. SEABURY & JOHNSON, of London, have forwarded to us a series of Plasters made in a style which deserves warm praise. All of them are of the best make that we have yet seen, and, taken as a series, constitute a considerable improvement in the manufacture of Medicinal Plasters, of which surgeons and physicians will, on inspection, easily realize the value. Their Salicylated Isinglass Plaster, spread on strong water-proof cotton cloth, and applied by wetting, is the best surgical adhesive plaster which we have seen. The plaster itself is made of pure gelatine, and is antiseptic in character; it adheres firmly and closely on being wetted with a sponge; it does not spoil in any climate. It is obviously from its manufacture calculated to last much longer than the ordinary adhesive plaster. The Mustard Plaster, the Capsicum Plaster, India Rubber Blister Plaster, and Pitch Plasters are all equally deserving of commendation."

The "British Medical Journal," "Medical Times and Gazette," "Chemist and Druggist," and many of the Provincial Medical Journals have noticed our productions as worthy of special commendation.

ANALYSIS OF BELLADONNA PLASTERS.

BY J. P. BATTERSHALL, PH.D.

(Analytical Chemist.)

Equal lengths and widths of Belladonna Plasters were taken. The Plasters were first treated with a solvent in order to remove the rubber. The liquid was then agitated with distilled water; the aqueous solution was then separated from the solid precipitates; these were slightly evaporated with additions of dilute sulphuric acid, and the separated matter removed by filtration.

The solution was next carefully evaporated to dryness over a steam bath, until its weight remained constant. The difference in weights was about

3 to 2 in favor of Seabury & Johnson's Plaster.

On treating the solid extract with water separating the coloring matter, and adding a solution of Mercuric Chloride in presence of an excess of Iodide of Potassium the S. & J. solution gave a larger amount of precipitate.

A SECOND TEST

based upon the coloring power of the extract obtained as above, was also employed. A solution of the Pharmacopœia Alcoholic Extract of Belladonna of known strength, was taken as a standard with which to compare the solid extract taken from all the plasters analyzed. The liquid prepared from Seabury & Johnson's Plaster, possessed a much greater coloring power than that found in Dr. Grosvenor's; conclusively proving the correctness of the direct analysis, and showing the same difference in strength, **in favor of Seabury & Johnson's Belladonna Plaster, which contained fully 50 per cent. more Extract of Belladonna.**

NEW YORK, *June 7th, 1878.*

MESSRS. SEABURY & JOHNSON,

GENTLEMEN:—Samples of the Belladonna Plaster manufactured by your firm, and by Dr. Grosvenor's were purchased by me of a well-known drug house, and comparative tests made of the same, for the purpose of determining the relative amount of Extract of Belladonna in each. The tests used were applied to an equal quantity of each plaster, and under similar conditions. I find that a larger amount of the solid Extract of Belladonna is contained in your preparation **which result was corroborated by repeated trials.**

Respectfully yours,

J. P. BATTERSHALL, Ph.D.

Analytical and Consulting Chemist.

IMPORTANT OBSERVATIONS

concerning the instability of several brands of India Rubber Porous Plasters ; we take the liberty of offering an explanation :

The elasticity and strength of India Rubber is almost entirely destroyed by solvents ; dissolved rubber when combined with adhesive agents, quickly decomposes the entire combination. Dealers who purchase articles made by this method, find in a short time that the plaster loses its adhesiveness. The manufacturers of this class of unreliable India Rubber Porous Plasters advise purchasers to use Turpentine or Benzine to re-establish their adhesive properties ; in attempting this impossibility, dealers maintain that the directions are immeasurably more severe than the ailment under which the patient suffers. Analysis also proves that such plasters have not only lost their adhesiveness beyond recovery, but the incorporated extract or drug has been nearly or wholly destroyed.

Therefore, every pharmacist should bear in mind, that the process invented and exclusively employed by us, and which differs from every other process,

Ensures the Integrity of Every Ingredient.

Consequently, if a plaster of our make be found not sufficiently adhesive,

Apply heat to it until it is.

The application of heat will not injure the medicinal or mechanical properties of any India Rubber plaster made by our process ; it will simply increase its adhesiveness.

IF YOU FAIL TO OBTAIN

from your wholesale druggist any of our articles, please send to us direct, and your order will meet with prompt attention.

TO ORDER ONLY.

Special sizes or styles. Plasters on materials not mentioned in our list.

Established Facts Concerning Porous Plasters.

Physicians, after having carefully compared the relative merits of porous and spread plasters, maintain that *making medicinal plasters porous, is an absolute necessity and a therapeutic advantage.*

Spread and unporoused plasters slide and often move entirely from the originally affixed part ; consequently the medicinal local action of the drug is lessened. Sliding is due to the plaster mass becoming softened, through the constantly confined and accumulating moisture and matter ; these excretions finding no outlet, as in the porous plaster, it is also, in addition to the milder effect previously alluded to, a very serious question, since the theory of absorption is no longer a doubtful one, whether such absorptions are not detrimental to the patient, representing as it does the natural and attracted waste of the system.

Porous plasters adhere tenaciously. By means of the small pores, a system of drainage is created through which is eliminated and evaporated all stimulated matter. Remaining immovable in any applied position, an increased medicinal local effect is undoubtedly obtained, while for comfort and cleanliness their superiority is clearly established. India rubber porous and spread pharmacopœia, medicinal, and surgical plasters must, through their intrinsic merit, sooner or later supercede all others.

IMPORTANT OBSERVATIONS.

HOW TO APPLY INDIA RUBBER POROUS AND SPREAD PLASTERS.

CAUTION.

The part to which a Plaster is about to be applied should be clean and dry. Do not remove the printed cloth on the back of the Plaster, as that prevents the linen from being soiled.

How to Make Them Adhere.

First remove the cloth on the face of the Plaster by pulling it from the surface. Having applied the Plaster, press it to the part until it conforms perfectly to the skin. Should the Plaster, after having applied it, fail to adhere strongly, heat it gently until adhesive.

Note Well.

Should the cloth on the adhesive side of the Plaster adhere too strongly damp it, and allow it to remain moist a few seconds; it can then be easily removed. Wipe it dry with a piece of cotton cloth and apply in the manner as previously directed.

TO TAKE OFF THE PLASTER.

Loosen one end, take firm hold, and pull it quickly; do not attempt to remove it by inches.

A Plaster should be worn just long enough to have the desired effect, and no longer.

WHERE TO KEEP PLASTERS.

India Rubber Plasters in the coolest place.

Isinglass Plasters of every description, including Corn, Bunion and Court Plasters in a dry place of *ordinary temperature*. Extreme heat contracts them and makes them hard and brittle.

Mustard Plasters in that part of the establishment which is driest and furthest removed from dampness. Mustard quickly yields its volatile properties to moisture, creating mold and rendering them ineffective.

Emp. Adhesive (dyachylon) should be kept in a moderate temperature, free from extreme changes.

Plasters should never be stocked near a stove or heater; nor on top shelves in a warm room during the winter months.

ABSORBENT AND BORATED COTTON.

The growing demand for economical surgical dressings, has encouraged us to give the manufacture of absorbent and antiseptic cottons very careful attention. The use of this new desiccant is calculated to become very general among Surgeons and Gynecologists, on account of its cheapness and intrinsic qualities.

Absorbent Cotton when skillfully prepared is entirely free from foreign matter, retains its natural elasticity, has no acid reaction, and is thoroughly and quickly absorbent. Our article will be found to give perfect satisfaction. It is already employed with excellent success in our large city hospitals.

From "THE NEW REMEDIES."

SEABURY & JOHNSON'S PLASTERS.

"The name of this house has become so well-known, both here and abroad, for the exceptional excellence of the plasters of all kinds made by it, that there would appear to be hardly an occasion for referring to their goods. A few of the more recently introduced varieties have lately come to our notice, and it will perhaps be of interest if we mention them in this connection. The Mustard Plaster, spread on cotton cloth is free from faults common to prepared sinapisms; one being the quality of the material used and the freedom from liability to crumble in either a wet or dry state.

In the line of anodyne plasters, aconite, belladonna, assafoetida, ammoniacal and opium are provided; a counter-irritant effect can be had in any degree, from that caused by strengthening and poor man's plasters up through warming, pitch, capsicum, and mustard to cantharides; among medicinal plasters of other sorts, lead, mercurial, iron, arnica, carbolated, galbanum, etc., are offered; while simple adhesiveness is obtained in the different varieties of court plasters, isinglass plaster, and the surgeon's rubber adhesive above referred to."

From The "DRUG BULLETIN AND REPORTER."

MEDICAL AND SURGICAL PLASTERS.

"Messrs. Seabury & Johnson sent us a package of samples of their medicinal and surgical plasters. On inspection of these samples we are impressed as every observer must be, with the mechanical neatness and professional skill displayed in their preparation. We most heartily congratulate Messrs. Seabury & Johnson upon the degree of success with which they have experimented and wrought. They have made a special study of the combination of rubber in the manufacture of plasters, both medical and surgical. From our own experience of the merits and virtues of their plasters, we should unhesitatingly say they had reached perfection. Yet acknowledging the valuable assistance they have heretofore received from the hints and suggestions of physicians and surgeons, they invite further suggestions from the same source. We need not add that we have full faith as well, in the intentions as in the ability of Messrs. Seabury & Johnson to meet the demands both of the profession and of the public, for a superior article in their line of preparations."

The "DRUGGIST'S CIRCULAR," and nearly every Pharmaceutical and Medical journal of any reputation, have favored us on several occasions with very flattering notices.

MEAD'S SURGICAL DRESSING PAPER.**Waterproof and Antiseptic.***(From The Medical and Surgical Reporter, April 19th, 1879.)***WATERPROOF PAPER.**

A new preparation to take the place of Oil Silk and similar articles.

BY W. W. KEEN, M.D.

Surgeon to St. Mary's Hospital, Philadelphia.

"Some years since I introduced into St. Mary's Hospital the use of waxed paper as a substitute for oiled silk. We have made it in the hospital ever since, and it has served its purpose in part. It is certainly a very cheap substitute, but tears readily, cracks when folded, absorbs the moisture of the dressings or discharges, is not, therefore, waterproof, and is too thick and clumsy. In the antiseptic dressings, of course it is valueless. I have tried a number of other papers, prepared with paraffine, varnish, etc., but they have all been unsatisfactory—the paraffine paper being, however, the best of all. The successful combinations of rubber with various substances in plasters lately suggested to me the combination of rubber and paraffine for paper dressings. Accordingly I wrote to Messrs. Seabury & Johnson, of New York, and requested them to prepare some samples of such paper for me to try. They promptly did so, and I now submit the results. If further practical use of the "waterproof paper" confirm the advantages shown by my experiments and trials thus far, I think we have now a very *cheap* and very *efficient*, and in some respects a *superior* substitute for oiled silk; especially is this so for hospital use, where economy is of so much importance and the cost of oiled silk so great.

Waterproof paper. After 72 hours not a drop had passed through. To test it still more thoroughly, I took a piece of the paper, crushed it up in a ball, unrolled the creased and apparently cracked paper, repeated this crushing four times, and tested it as before. It was just as satisfactory. The rubber preserved the integrity of the paper at the creases, and not a drop filtered through during a test of 48 hours. While floating on water at 153° (see below) a piece of the paper was quickly taken out and folded into a funnel, with marked creases, and filled with hot water (153°). None had filtered through after a six hours' test.

It will be noticed that it is not only waterproof, but does not *absorb* any fluid. The advantages from non-absorption of discharges, whether sweet or foul, need only be stated.

To test its permeability as to *air*, I placed a sheet of the paper close before a candle, and directed a strong current of air against the paper by the mouth, by a syringe, and by a Politzer air bag. When the effect of currents from the air which escaped around the edges of the paper was obviated, the candle flame was not affected. The same result was obtained after alternately crushing the paper and unrolling it three times, showing that no appreciable mechanical break had occurred.

Briefly stated, then, the advantages of the water-proof paper suggested by me, and worked out by Seabury & Johnson of New York, is:

It is impermeable to water for 72 hours at the least, even after being repeatedly creased and crumpled. It is impermeable to air under similar conditions. It does not absorb water or discharges. It may be used with the hottest dressings that can be borne. It is flexible and yet strong enough for all ordinary wear, especially as it will be used only once. Its cost is many times less than that of other similar dressings, and it is also prepared with Boracic Acid for the antiseptic dressings."

The paper prepared under the above trade mark, "Mead's Surgical Dressing Paper," is identical with that suggested by Dr. W. W. Keen, which forms the basis of his publication. The above is simply an extract from his article. The entire article will be sent to any address on application.

READY-MADE MUSTARD PLASTER.

We have prepared for family use, a convenient, clean, and thoroughly efficacious mustard poultice, spread on strong cotton cloth, which can be used at any moment, *by simply dipping the plaster into water until perfectly wet.*

Our plaster is a decided improvement on the best French mustard papers; mustard papers when thoroughly wet break into pieces and soil the skin; this serious objection is entirely removed by our article, as we spread it on pliable cotton cloth, while the mustard is so treated that it cannot crack or peel off as is the case with all other makes, consequently it will not soil the skin or linen.

Being manufactured wholly of pure mustard, we guarantee them to be absolutely free from Croton Oil, or other dangerous substitutes that are often employed to induce intense irritation. To insure greater efficacy and to guard against the injurious effects of dampness, we wrap our mustard plasters in waterproof paper.

SPECIAL NOTICE.

Mustard Plasters should always be kept in a perfectly dry place, as it is well known that mustard quickly imparts its essential or medicinal properties to moisture.
